

Braiden J. Miller

Senior Software Engineer | Product Partner | Platform Builder

Golden, Colorado | (219) 743-2686 | braidenjamesmiller@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

SUMMARY

Senior software engineer with 7+ years delivering distributed platforms and 6 years of prior people leadership. Delivers complex platform work on committed timelines by aligning product managers, architecture, and dependent teams around testable plans, clear contracts, and reliable releases. Hands-on Java/Kotlin engineer known for moving millions of records out of brittle monoliths with reversible cutovers, turning customer-reported defects into same-day production fixes, and diagnosing hard performance problems without destabilizing the product.

SELECTED OUTCOMES

On-time launches	Same-day fixes	One-click rollback
Committed delivery across product, architecture, and dependent teams	Customer defects diagnosed, verified, and released through a safe delivery path	High-risk migration cutovers designed to reverse safely

EXPERIENCE

Senior Software Engineer II

2022 - Present

Pax8

- Delivered complex platform launches on committed dates by aligning product managers, architecture, analytics, frontend, backend, and partner teams around ADRs, phased plans, and explicit dependencies.
- Moved millions of records out of a brittle monolith into a domain-aligned service with explicit module boundaries; kept old and new systems synchronized and made cutover reversible with one-click rollback.
- Replaced a search path that exceeded 60 seconds with Elasticsearch in one two-week sprint, restoring sub-second results and enabling a safe relaunch.
- Established CI/CD, service and integration testing, and observability patterns that let customer-reported defects move from diagnosis to a verified production fix in the same day.
- Designed and load-tested a webhook platform with DDD, CQRS, Kafka, and backpressure; dispatched 10,000 outbound calls in under 30 seconds while protecting downstream services.
- Created API-first standards, shared libraries, testing patterns, and practical coaching that helped frontend, backend, analytics, and partner teams deliver against clearer contracts.
- Delivered cloud AI provisioning and LLM gateway foundations under an aggressive launch timeline, coordinating with vendor and internal specialists to close authentication and ownership gaps.

Software Engineer

2020 - 2022

ZenPlanner / Daxko

- Collaborated on a greenfield microservices platform supported by CI/CD, contract tests, and unit, service, integration, and end-to-end test suites.
- Built complex Stripe-backed subscription and billing flows covering prorates, split funding, multiple locations, partial payments, refunds, and varied billing schedules.
- Used Kafka, API gateways, webhooks, and documented public APIs to deliver reliable financial workflows across team and vendor boundaries.

EXPERIENCE CONTINUED

Software Developer II

2019 - 2020

NexGen Technologies

- Developed and optimized microservices in a large production application while collaborating through design reviews and pair programming.
- Reduced monolith coupling by extracting reusable components and added tests, services, and APIs for incremental delivery.

SELECTED ENGINEERING WORK

Platform App Lab | Current

Self-hosted portfolio

- Build and operate a full-stack Kotlin/Spring and React platform that connects product framing, architecture decisions, implementation, tests, releases, and real-device feedback.
- Designed Media Transfer for resilient photo and video batches, guest-friendly share links, media derivatives, retention, and reliable original-quality downloads across desktop, Android, and iPhone.
- Publish release-matched OpenAPI contracts, ADRs, module diagrams, operational risks, and source evidence so reviewers can follow decisions without relying on a private code tour.

TECHNICAL PROFILE

Languages and frameworks: Java, Kotlin, TypeScript, React, Spring Boot, Axon Framework, Playwright

Architecture and data: Event-driven systems, Kafka, CQRS, DDD, REST/OpenAPI, PostgreSQL, MongoDB, MySQL, Elasticsearch/OpenSearch

Delivery and quality: Docker, Kubernetes, CI/CD, GitHub Actions, AWS, Azure, Honeycomb, contract testing, integration testing, load testing, end-to-end testing

EDUCATION AND CERTIFICATIONS

Bachelor of Science, Business Management

Western Governors University, 2017

Oracle Certified Associate

Java SE 8 Programmer I

Full Stack Java Program

Skill Distillery, 2019

CompTIA Project+

Project planning and stakeholder communication
